

# ANDRÉS MAURICIO ARDILA FAJARDO

**Business Analyst | Data Analyst | Business Intelligence | Automation | Generative AI | LangChain | RAG**
ardilupus@gmail.com | +57 301 7685097 | Bogotá, Colombia | LinkedIn | Website

## PROFESSIONAL SUMMARY

Engineer and data analyst with an MSc in Visual Analytics and Big Data, specialized in business intelligence, automation, data quality and process optimization in high-volume transactional corporate environments and in marketing for multinational brands. I combine analytical thinking with business acumen, acting as a bridge between operations, engineering teams and clients to deliver measurable, sustainable improvements.

3+ years of experience designing automation pipelines and ETL processes in Python, automating financial processes for the validation, transformation and control of more than 1 million bank records. I have implemented multi-level integrity logic in SAP HANA and Power Platform flows for global operations with banking rules from more than 50 countries, reducing operating time by up to 95% through data quality controls, financial anomaly detection (45 fraud attempts detected in time), de-duplication and multi-level validations.

Currently, as a BI Business Analyst, I migrate dashboards to Snowflake, design data governance and relational models, and build statistical projections for brands such as Novo Nordisk, DKT, Rimax and Rayovac, among others. I develop generative AI solutions and automations with orchestrated architectures in LangChain, RAG and embeddings, orchestrating up to 8 LLMs, local (Ollama) and via API (Gemini 2.5 Flash, OpenAI/ChatGPT, Claude), plus image reading to turn unstructured data into data pipelines. Experience with Power BI, Tableau, Looker, Adobe Analytics and dashboards as code (Streamlit in Snowflake), JSON (NoSQL) data structuring and NLP models for sentiment analysis.

## TECHNICAL SKILLS

- Advanced Python (Pandas, NumPy, DuckDB, Selenium, BeautifulSoup, Playwright, applied NLP)
- Advanced SQL and Snowflake (bronze/silver/gold medallion architecture, Streamlit in Snowflake), SQL Server
- Databases: MongoDB and JSON (NoSQL), Neo4j (graphs), star and snowflake relational modeling
- Generative AI: LangChain (agent orchestration), RAG, embeddings; 8 LLMs, local (Ollama) and via API (Gemini 2.5 Flash, OpenAI/ChatGPT, Claude)
- ETL design and implementation, workflow automation, API integration and consumption
- Visualization: Power BI, Tableau, Looker, Adobe Analytics, dashboards as code (Streamlit), D3.js
- Power Platform (Power Apps / Power Automate), SAP HANA, Excel VBA, Git/GitHub, data connectors (Windsor AI)

## ANALYTICAL SKILLS

- Data governance, KPI modeling and translating business requirements into analytical solutions
- Applied statistical modeling and rule-based statistical projections (mean, median, dispersion)
- Anomaly detection, data quality control, fraud control and risk mitigation
- Practical application of Machine Learning and Deep Learning

## PROFESSIONAL EXPERIENCE

**Business Analyst – BI – Asylum marketing** | *07/2026 – Present*

- Data analysis and business intelligence for brands such as Novo Nordisk, DKT, Rimax and Rayovac, among others, turning paid media and organic content metrics into insights and recommendations.
- Migration of dashboards to Snowflake (bronze/silver/gold layers), built as agentic code and maintained with AI assistance (Claude); report automation with Python and Streamlit.
- Python pipelines that extract data from images (reach, views and watch time on social media) into Google Sheets, Excel and Snowflake.
- Data pipelines from Adobe Analytics to make measurement recurrent, evaluate website performance and project its behavior.
- Influencer projection model for Novo Nordisk on Instagram based on statistical rules, with custom charts.
- Annual projection for Rayovac combining data sources (Fanpage Karma, Windsor AI) to produce next-year recommendations.
- Data governance and star relational model with sub-dimensions for the Novo Nordisk physician funnel: validation, identity matching, activation and attribution.
- Social media comment extraction and robust LLM-based sentiment analysis, evaluating comments in batches instead of traditional lexical analysis.
- **Technologies:** Snowflake, Python, Streamlit, SQL, Adobe Customer Journey Analytics, Looker, Fanpage Karma, Windsor AI, LLMs.

**Data Analyst – Bogotá Shared Service Center (BSSC) supporting Delta Air Lines** | *04/2025 – 03/2026*

- Optimization of treasury financial processes in a Global Shared Services environment, processing more than 1 million transactional records with indexing and pagination.
- Automation of SAP structures (FB60) and critical ETL flows, reducing operating time by up to 95%.

- Multi-level validations and international banking rules to ensure accuracy, compliance and risk mitigation in baggage, refunds and customer care; anomaly detection logic for preventive control of critical transactions.
- Advanced sentiment analysis of more than 20,000 catering comments: flat Excel transformed into sentence-level JSON (NoSQL), an ensemble of 5 pre-trained models orchestrated with LangChain voting by majority, and ambiguous cases escalated to an LLM; sentence-level and overall sentiment with a keyword structure.
- AI-generated photos for about 200 Service Center employees: model selection (Nano Banana), predefined prompt and backend design to control token usage.
- **Technologies:** Python, SAP HANA, Power BI, Power Apps, Power Automate, LangChain, NLP, Nano Banana.

**Project: Intelligent Job Search and Talent Recruitment Agent – Agentic Talent Intelligence** | *03/2025 – Present*

- LangChain-orchestrated agent architecture integrating multi-platform web scraping (LinkedIn, corporate job portals), ETL pipeline, scoring, de-duplication and notifications.
- RAG over resumes and job postings: embeddings and semantic search for profile–job matching with an explainable match score, beyond the keyword filters of traditional ATS.
- Orchestration of 8 LLMs, local (Ollama) and via API (Gemini 2.5 Flash, OpenAI/ChatGPT, Claude), for profile gap analysis and opportunity prioritization.
- Persistence and segmentation in MongoDB, real-time alerts via the Telegram API and a job market monitoring dashboard.
- **Technologies:** Python, Selenium, BeautifulSoup, LangChain, RAG, Embeddings, Ollama, LLM APIs, MongoDB, Power BI.

**Project: Comment Extractor and Advanced Sentiment Analysis – Personal project** | *2026 – Present*

- Playwright scraper that, from a URL, extracts public data from Instagram, Facebook and TikTok posts and reels: comments, replies, likes, interactions and captions, with continuous versioned improvements.
- Sentiment analysis with the same voting ensemble used at Delta, adapted to social media comments, outperforming traditional lexical analysis that labels almost everything as neutral.
- **Technologies:** Python, Playwright, LangChain, LLM APIs, Pandas.

**Researcher – Sports Performance Analysis – Master's thesis, UNIR** | *01/2024 – 09/2024*

- Ranking of forwards in the Spanish, Italian and English leagues: FBref web scraping, 93 fields analyzed, weighted ranking model in SQL Server with a salary index. Technologies: Python (Pandas, Seaborn, Matplotlib), SQL Server, Excel VBA, Google Colab, GitHub.

**Database Administrator – CVR Ingeniería – Blueberry farming project** | *01/2021 – 07/2021*

- Real-time sensor-based monitoring and automated analysis of agricultural data for early anomaly detection, improving crop yield by 85%.

**Other experience**

- **Data Science Instructor and Course Creator – ESAP** (2022 – 2023): training in SQL, data science and generative AI for more than 150 participants.
- **Data Architect – Asesorías y Cobranzas** (06/2020 – 12/2020): enterprise database architecture, query optimization and data governance.

## EDUCATION

- **Master's Degree in Visual Analytics and Big Data** – UNIR, Spain (2025).
- **Sound Engineering** – Universidad de San Buenaventura, Bogotá (2018).

## CERTIFICATIONS AND ADDITIONAL TRAINING

- Privacy and Data Protection, Information Security Awareness and SAP Navigation ERPSAP101 (2025)
- Python Programming (75 h) – UNIR (2024)
- Leadership (45 h) – Miami International University (2023) · ChatGPT Prompt Engineering for Developers – DeepLearning.AI (2023)
- Build Basic Generative Adversarial Networks (GANs) – DeepLearning.AI / Coursera (2022)
- Deep Learning Specialization (5 courses) – DeepLearning.AI / Coursera (2021)
- Machine Learning – Stanford University / Coursera (2020) · Google Digital Garage – Digital marketing (2020)
- Deep Learning and Artificial Intelligence – Universidad Nacional de Colombia (2019)
- Languages: Spanish (native), English B1+ (in progress)
